## Data Analysis

### Analysis Objectives :

- To understand the drivers behind the gap between growth and profitability.
- To measure the financial impact of operational and regulatory changes on the company's performance.
- To assess whether current growth is sustainable under the new operating structure.
- To support data-driven decision-making aimed at improving operational efficiency going forward

## The problem

Despite continued growth in order volumes and revenues, the data shows clear pressure on operating and profitability margins in recent periods. This divergence indicates the presence of external operational factors that have impacted the cost struct

# Data and its source. >

## About the data

The analysis was based on the publicly available“ financial data of Jahez (quarterly and annual reports)

The data included key indicators such as :

- GMV (Gross Merchandise Value) •

- Number of orders •

- Operating and profit margins •

In addition to reviewing regulatory changes affecting • the delivery and logistics sector in the Saudi market

## Innovation Aspect

Jahez's innovation lies in shifting from a traditional delivery model that relied on independent delivery drivers to an integrated operating model, through the establishment of an internal logistics arm (Logi) staffed by Saudi nationals.

This transformation is supported by a data-driven decision-making framework that links regulatory changes to financial and operational performance, enabling proactive cost optimization, improved operational efficiency, and stronger alignment with regulatory requirements.

Logistics Transformation

## **Conclusion :**

**This project shows how data analytics can turn regulatory challenges into strategic advantages.**
